Throughout their existence, tropical rainforests have been affected by natural forces like fire, drought, and storms. These events occur on a random basis and can damage large stretches of rainforest. However, the damage caused by these natural occurrences is generally different from that caused by human activities; namely in that the forest loss is not complete and parts of the ecosystem continue to function.

Amazonian Rain Forests: Ecosystem Disturbance and Recovery ...

Our native woodlands have cycles that operate over centuries or even millennia, and from this perspective natural events that are apparently destructive can, paradoxically, breathe life and health into the ecosystem. Natural disturbance can take many forms, and on a broader scale, almost any ecological interaction can be seen as a kind of disturbance: a gust of wind carrying a pine seed onto new ground, the movements of predators such as wolves causing their prey to run for safety, and the ...
