Rhytidoplasty is a palliative procedure in which face wrinkles are surgically removed to promote a more youthful appearance. This book, written by leading specialists for Brazil and abroad, discusses a wide variety of topics related to facial rejuvenation. The first sections focus on the surgical planning, including psychological considerations, preparation of the patient and anatomical and biochemical changes caused by the aging process. It also describes the surgical anatomy of the forehead, face, neck and eyelids. The third section provides a comprehensive overview of the basic techniques of facelift with details of refined surgical approaches for each segment of the face and neck. It highlights liposuction techniques, lipo-injection as well as transference of stem cells, showing their importance in reshaping the facial contours. It addresses both the treatment of soft tissue and craniofacial bone structures to improve the aesthetics of the face. The next sections present the final scars after face-lifting, minimally invasive procedures as complementary approaches during rhytidoplasty and the associated procedures during rhytidoplasty. The last section discusses postoperative care. Aesthetic Facial Surgery consists of 64 chapters focusing on all aspects of face lifting, and meticulously describes surgical details not covered in other medical books. Featuring numerous figures, photographs and videos, it is a valuable resource for young and experience surgeons alike around the world.

Aesthetic Rejuvenation of the Face and Neck presents the latest surgical and non-surgical techniques used in facial aesthetic rejuvenation. In the current environment of "lunchtime facelifts" and "light lifts" that often produce poor results, this book fulfills the need for a text that takes a careful, detailed approach to describing high-quality aesthetic facial rejuvenation procedures. Dr. Connell, the senior editor, is a recognized world expert on facial rejuvenation surgery, and his co-authors offer a wide range of perspectives and expertise in the specialty. Key Features: Written by experts from around the world, most fellowship trained by Dr. Connell Presents techniques that provide long-lasting results and are proven to be safe Enhanced with more than 650 full-color illustrations and photographs During his over 50 years in practice Dr. Bruce Connell has trained about 50 fellows and given international annual teaching programs. In addition, hundreds of surgeons have made a pilgrimage to watch him operate and learn from this master surgeon. This book is your opportunity to learn his concepts and techniques.

When the first edition of this atlas was published in 2005, it was well received throughout the oculoplastic and ophthalmology community for its simplicity and clinical focus. Now, a decade later, surgical techniques have been updated to reflect current practice models and advances in technology. The field of oculoplastic surgery has grown and evolved to include all aspects of facial plastic surgery and the literature must now reflect the advancements of this field. Oculoplastic Surgery Atlas: Cosmetic Facial Surgery, 2nd edition combines text and diagrams, plus surgical videos that enable readers to perform this surgery with the best possible instruction and preparation. Written for ophthalmology specialists and residents, this new edition presents many aspects of facial cosmetic surgery, including blepharoplasty, endoscopic forehead surgery, rhytidectomy, and soft tissue and lip augmentation. Review of the previous edition: "The book offers insight into the possibilities and technology of modern aesthetic cosmetic surgery in the face region. ... The book can be recommended for the aesthetic surgeon and for ophthalmologists. ... The ophthalmologic plastic surgeon will find this book of interest especially in showing a lot of additional possibilities and dimensions in this field. The book will be an asset in every ophthalmic surgeons library." (Karl-Heinz Emmerich, Graef's Archiv for Clinical and Experimental Ophthalmology, Vol. 245, 2007)

Subperiosteal, extended sub-SMAS, deep plane, and composite rhytidectomy are all names that have been used to describe the current, more extensive operations for facial rejuvenation. Although these procedures provide superior results, they also involve deeper dissections with the potential for injury to the facial nerves. In order to avoid injury to these nerves, a thorough understanding of their locations is crucial for surgeons performing these operations. Facial Danger Zones, 2nd Edition, by Dr. Brooke Seckel, provides the key to safety in these procedures. Drawing on his expertise in neurology and plastic surgery, Dr. Seckel has created a practical and beautifully illustrated color atlas to alert surgeons to the facial danger zones encountered in these deep plane face lifts. Divided into seven major facial danger zones, this clinical atlas takes each zone and graphically demonstrates the nerve and consequence of injury, the anatomic borders of each facial danger zone, and the techniques for safe surgical dissection. If you are performing, or preparing for, the more extensive face-lift procedures, this book will help you avoid the surgical complications of facial nerve damage. It is a must for every plastic surgeon performing face lifts or any facial procedure.

In the highly popular MACS-Lift Short-Scar Rhytidectomy, Drs. Patrick Tonnard and Alexis Verpaele introduced surgeons to an exciting new concept in facial rejuvenation-one that offered shorter incisions, minimal morbidity, and reduced recovery time. In this companion volume, Short-Scar Face Lift: Operative Strategies and Techniques, Drs. Tonnard and Verpaele build on that foundation and expand their scope. The book is organized into two sections. Part I, Short-Scar Face-Lift Techniques, discusses indications, applications, and alternate short-scar face-lift techniques. The editors elaborate on the different aspects of the MACS-lift and short-scar face-lifting. They review the important lessons they have learned during years of experience with the MACS-lift, including a discussion of complications, problems, limitations, and technical tips and tricks. They are joined by Dr. Foad Nahai, who discusses technical considerations; Dr. Joseph Hunstad, who provides a systematic step-by-step guide to his approach; Dr. Mark Jewell, who describes the biomechanics of the MACS-lift and offers technical tips for success; and Dr. Daniel Baker, who describes his personal lateral SMASectomy short-scar face-lift technique and compares it to other comparable and convergent techniques. Part II focuses on Combined Approaches and Ancillary Treatments for facial rejuvenation. In this section, Dr. Daniel Labb discusses the anatomic basis of minimally invasive neck correction through a short scar and Dr. Alain Fogli details his simple, safe technique for temporal lifting. Finally, Dr. Thomas Roberts brings all of these techniques and treatments into perspective through his analysis of the volumetric concept of facial rejuvenation. He provides an in-depth discussion of facial fat micrografting and describes how the synergistic use of multiple surgical and nonsurgical modalities can lead to superior results. With beautiful, four-color illustrations, numerous case examples, and an accompanying DVD with operative videos, this book provides the ultimate surgical instruction that will allow surgeons to incorporate this procedure into their practice.

Color Atlas of Oculoplastic Surgery provides surgeons familiar with surgical anatomy with a broad survey of contemporary oculoplastic surgery. It illustrates and provides basic information on surgical techniques that are straightforward and reliable in managing many common oculoplastic conditions that a clinician may encounter in practice. The material is presented with precision and clarity, there is special emphasis on understanding the pathophysiologic mechanism of diseases. This integrated text, accompanied by color photographs and complementary line drawings, guides the surgeon through each procedure in a systematic fashion. Pertinent anatomy, surgical indications, important technical considerations, and complications receive appropriate emphasis in each chapter.

Benefit from the experience and expertise of a skilled face-lift surgeon, Dr. Fritz E. Barton, in this outstanding book on facial rejuvenation. Written in a personal style that engages the reader, Dr. Barton shares his personal philosophy that a more extensive face lift is worth the effort if it delivers a highly consistent, long-lasting, and natural result. For him, that operation is the High-SMAS. Step-By-Step Descriptions This beautiful, four-color semi-atlas describes and illustrates every step leading to mastery of the High-SMAS face-lift procedure with tips and tricks scattered throughout. A detailed analysis of variations in different faces is provided, along with methods for approaching them surgically to help the surgeon individualize treatment. Comprehensive Coverage The book is divided into two parts. The first part, Basic Considerations, contains a wealth of information about topics ranging from office set-up and patient consultation to anatomy and anesthesia. The introductory chapter on the office contains valuable insights and suggestions to assist surgeons in dealing with issues of office planning, staffing, and effective office management. The second part, Procedures, includes step-by-step descriptions of operations for the forehead, eyes, face, and neck. To complement these technique chapters, the book also includes information on perioperative care and complications. Two extensive chapters on nonsurgical cosmetic treatments describe the various noninvasive treatments, such as lasers, botox and fillers, and various topical skin care options and how these can be combined with surgical rejuvenation to complete and enhance the overall result.

This book deals with a special form of facial rejuvenative surgery, which considers the three-dimensional anatomy of the face and benchmarks it against biomechanical models of the face. Traditional approaches to the ageing human face have been based on a two-dimensional approach. The authors, however, consider the human face using a three-dimensional platform that reflects height, width and depth and thus defines spatial divisions or pilasters. The anatomically accurate and biophysically based three-dimensional computational models, originally used to simulate facial expressions and subsequently in the dynamic evaluation of the various soft tissues, offer a valuable new tool for surgical techniques. The book is divided into four chapters, the first of which describes the historical developments, evolution of facelift procedures and review of traditional two-dimensional approach. The second chapter presents three-dimensional surgical anatomy of the face and neck with the introduction of "facial pilasters". Treating the human face as a collection of compliant and rigid structural components which obey engineering principles and its biomechanical behaviour is discussed in chapter three. The last chapter provides the reader comprehensive information on the surgical procedure for contour vector congruent facelift, including case studies. An alternative approach (Rejuvenative Facial Lipomorphoplasty) to the de-volumed ageing face with little sagging and skin excess is introduced together with case studies. This book was motivated by the desire to define the key steps in facelift techniques and provides an essential guide for young plastic surgeons, as well as experienced surgeons who are dissatisfied with the current two-dimensional platform.
