Throughout the past century, a debate has raged over the thesis of realism and its alternatives. Realism—the seemingly commonsensical view that all or most of what we encounter in the world exists and is what it is independently of human thought—has been vigorously denied by such prominent intellectuals as Jacques Derrida, Michel Foucault, Richard Rorty, Thomas Kuhn, Hilary Putnam, and Nelson Goodman. The opponents of realism, among them historians and social scientists who support social constructionism, hold that all or most of reality depends on human conceptual schemes and beliefs. In this volume of original essays, a group of philosophers explores the ongoing controversy. The book opens with an introduction by William P. Alston, whose writing on the subject has been widely influential. Selected essays then compare and contrast aspects of the arguments put forward by the realists with those of the antirealists. Other chapters discuss the importance of the debate for philosophical topics such as epistemology

and for domains ranging from religion, literature, and science to morality.

One of the most controversial of all works to survive from ancient Rome, the Augustan History is our main source of information about the Roman emperors from 117 to 284 AD. Written in the late fourth century by an anonymous author, it is an enigmatic combination of truth, invention and humour. This volume contains the first half of the History, and includes biographies of every emperor from Hadrian to Heliogabalus - among them the godlike Marcus Antonius and his grotesquely corrupt son Commodus. The History contains many fictitious (but highly entertaining) anecdotes about the depravity of the emperors, as the author

blends historical fact and faked documents to present our most complete - albeit unreliable - account of the later Roman Caesars.

This book provides clear answers to many questions that children ask, but also invites them to explore further and to ask many more questions. These clear and concise answers to 150 questions about the natural world, the human body, urban life, everyday life and human history are accompanied by more than 250 detailed and lifelike illustrations that help children visualize and contextualize the answers. Many of the larger illustrations are labeled, enabling children to build their vocabulary, and there is a quiz at the end of the book.
