Despite radical changes over the last century, race remains a central organizing principle in U.S. society, a key arena of inequality, and the subject of ongoing conflict and debate. In a refreshing new introduction to the sociology of race, *Recognizing Race and Ethnicity* encourages students to think differently by challenging the notion that we are, or should even aspire to be, color-blind. In this text, Kathleen Fitzgerald considers how the continuing significance of race manifests in both significant and obscure ways by looking across all racial/ethnic groups within the socio-historical context of institutions and arenas, rather than discussing each group by group. Incorporating recent research and contemporary theoretical perspectives, she guides students to examine racial ideologies and identities as well as structural racism; at the same time, she covers topics like popular culture, sports, and interracial relationships that will keep students engaged. *Recognizing Race*

and *Ethnicity* provides unparalleled coverage of white privilege while remaining careful to not treat "white" as the norm against which all other groups are defined. *Recognizing Race and Ethnicity* makes it clear that, in a time when race and racism are constantly evolving in response to varied social contexts, societal demands, and political climates, we all must learn to recognize race if we are to get beyond it.

Comer and Gould's *Psychology Around Us* demonstrates the many-often surprising, always fascinating-intersections of psychology with students' day-to-day lives. Every chapter includes sections on human development, brain function, individual differences and abnormal psychology that occur in that area. These "cut-across" sections highlight how the different fields of psychology are connected to each other and how they connect to everyday life. Every chapter begins with a vignette that shows the power of psychology in understanding a whole range of human behavior. This theme is reinforced throughout the chapter in boxed readings and margin notes that celebrate the extraordinary processes that make the everyday possible and make psychology both meaningful and relevant. The text presents psychology as a unified field the understanding of which flows from connecting its multiple subfields and reinforces the fact that psychology is a science with all that this implies (research methodology, cutting edge studies, the application of critical thinking).
