Sail design tool. This spreadsheet is meant to make sail design a little faster. It takes a few inputs, such as luff length and rake angle, and calculates sail area, the location of the center of effort and draws a simple picture of what the sail will look like. I use it to quickly run through a few different sail plans before I start cutting.

Performance RC Landsailers: Model Design Tools & Tips

The L12 builds on the very successful design of The Foiling Dinghy. It's a simple and easy to use dinghy with an outstanding performance. With its wide planning hull it offers sensational and fast downwind rides and still gives you a lot of stability for quick upwind sailing. It's the latest hull design on the dinghy market with a wave piercing ...

Do You Know These Five Light Air Sailing Secrets?

Sailing to windward at an average of 45 degrees (tacking through 90 degrees) you can expect speed of 8 - 9 Knots. In flat water you could be tighter at 80 degrees, whereas in choppy conditions you may open up the angle a little to gain more drive. TIPS ON TACKING Catamarans should be light and they therefore carry less way. A good design should tack easily without needing to back the jib.
