Troubleshooting database performance is a bit of a black art, many thanks to Mark Kirkwood for sharing his Postgres wisdom with me. If there's anything else you have successfully used to find the cause of your performance woes, please feel free to leave a comment.

If all else fails, or even if not, logs should always be checked to see if the system is reporting anything that's not right. We already discussed checking the postgresql.logs, but the system logs can give information about issues such as failing disks, failing memory, network problems, etc.

Common HA Troubleshooting and Recovery Procedures. In some cases, depending on your setup and configuration, it is possible to encounter a scenario in your PostgreSQL HA setup where the master and slave instances are rebooted or reconnected after a network failure, or that a HA failover has occurred due to the current master database instance going offline.
