6L1MOH - RAMOS KENNEDI

Phil Edmonston, Canada's automotive "Dr. Phil," pulls no punches. He says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation) Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underway) Ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers) GM's 2012 Volt electric car is a mixture of hype and hypocrisy from the car company that "killed" its own electric car more than a decade ago) You can save \$2,000 by cutting freight fees and "administrative" charges) Diesel annual urea fill-up scams can cost you \$300, including an \$80 "handling" charge for \$25 worth of urea) Lemon-Aid's 2011-12 Endangered Species List: the Chinese Volvo, the Indian Jaguar and Land Rover, the Mercedes-Benz Smart Car, Mitsubishi, and Suzuki Texas Hold 'Em) A pizza delivery never felt so good. Zac Grainger's life is pretty quiet. Other than coaching high school football, the only excitement he gets is playing poker with his close friends every other Saturday. That is until he opens the door to the hottest pizza delivery man he's ever seen, and man, does Zac want a piece of that pie. Eric Stanton spends long hours as an intern at one of the largest hospital in San Francisco. To help keep a roof over his head, he also has a part-time job as a pizza delivery driv-

er. When a gorgeous customer tries to flirt with him, Eric's too tired to reciprocate. Just when Eric wonders if he'll get a second chance with the guy, an order is placed requesting him personally. Tired or not, perhaps things are looking up. Slow-Play Charter Captain Bobby Quinn loves life on the water. What he hates is working for his brother. Charter Captain Bobby Quinn loves life on the water. What he hates is working for his brother. After years spent restoring an aging wooden yacht, his brother bought it out from under him. In Bobby's mind, if family will screw you at the drop of a hat so will everyone else so, except for his bi-weekly poker game, he sticks to the solitude of the boat he loves. Dr. Jules Peters knows all about solitude. When not working endless hours as Head of Emergency Medicine, he's tinkering in his garage. A collector of vintage cars in need of TLC, Jules has an impressive collection of cars but few friends. Jules meets Bobby when he's given a cruise around the San Francisco Bay as a gift. Although their mutual attraction is explosive, neither man is ready to move out of his comfort zone. It might take a meddling med student and an off-season football coach to get these two loners to see there's more to life than caring for inanimate objects. Pocket Pair For three years, Trey Huggins has watched and wanted Principal Cole Harding. As a teacher in the high school where they both work, Trey knows it'll never happen. Even if Cole was gay, he'd never go for a guy like Trey. Seeking love in other places, Trey meets a man online and finally agrees to a drink. What he gets instead is a trip to the emergency room in the back of an ambulance. With the school year swiftly approaching, Trey fights to overcome his physical limitations as well as his constant fear. For twenty-five years, Cole has managed to keep his private life separate from his job. Extending a helping hand to a colleague

shouldn't be a big deal, but the feelings Trey invokes in Cole are anything but professional. Can the teacher tutor the principal in love, or will class be out for these two before the school year even begins? Different Suits Angelo Pilato's worked hard to overcome his upbringing. Born in the rough part of the city, he had two choices, learn to fight or learn to talk your way out of confrontation. He isn't prepared to deal with a man like the sexy detective in charge of his friend's case. Moody Torrance is vastly different than any man Angelo's ever been attracted to. Stubborn and bossy don't begin to describe Moody's personality and those are his positive qualities. Moody hasn't the time or energy to put up with sissies. He may be gay, but that doesn't mean he's any less the Alpha he was born to be. Within minutes of meeting Angelo Pilato, Moody both hates and wants him. There's nothing more he'd like to do than bring the prissy man down a few pegs and show him life on the wild side. How do a quirky neurotic and an unbendable Alpha make a relationship work? Full House Life hasn't been easy for Marco De Le Santo. He's spent the last eight years raising his young brothers and sister. At the age of twenty-four, Marco finally has the

This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with "motor" referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an envi-

ronmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz - rich cars, poor quality. There's only one Saturn you should buy. Toyota - enough apologies: "when you mess up, 'fess up."

What Could Possibly Go Wrong... is the sixth book in Jeremy Clarkson's bestselling *The World According to Clarkson* series. No one writes about cars like Jeremy Clarkson. While most correspondents are too busy diving straight into BHP, MPG and MPH, Jeremy appreciates that there are more important things to life. Don't worry, we'll get to the cars. Eventually. But first we should consider: · The case for invading France · The overwhelming appeal of a nice sit-down · The inconvenience of gin and tonic · Why clothes are no better than ice cream · Spot-welding with the Duchess of Kent · And why Denmark is the best place in the world Armed only with conviction, curiosity, enthusiasm and a stout pair of trousers, Jeremy hurtles around the world - along motorway, autoroute, free-way and autobahn - in search of answers to life's puzzles and ponderings without forethought or fear for his own safety. What, you have to ask, could possibly go wrong... Praise for Clarkson: 'Brilliant... laugh-out-loud' Daily Telegraph 'Outrageously funny... will have you in stitches' Time Out 'Very funny . . . I cracked up laughing on the tube' Evening Standard Jeremy Clarkson began his career on the Rotherham Advertiser. Since then he has written for the Sun, the Sunday Times, the Rochdale Observer, the Wolverhampton Express & Star, all of the Associated Kent Newspapers and Lincolnshire Life. Today he is the tallest person working in British television.

Excerpt: The Volkswagen Jetta is a small family car produced by German automaker Volkswagen Group for the Volkswagen Passenger Cars marque since 1979. Positioned to fill a saloon/sedan niche above the firm's Golf hatchback offering, it has been marketed over six generations variously as the Atlantic, Fox, Vento, Bora, City Jetta, Jetta City, GLI, Jetta, and Sagitar. The Jetta was originally adapted by adding a conventional trunk to the Golf hatchback, and some distinctive styling (usually the front end, and sometimes slight interior changes). It has been offered in two- and four-door saloon (sedan), and five-door estate (station wagon) versions - all as five-seaters. As of 2005, over 6.6 million cars have been sold worldwide, over one-third in the United States alone. Since the original version in 1980, the car has grown in size and power with each successive generation. By mid-2011, almost 10 million Jettas have been produced and sold all over the world. The Jetta nameplate is a reference to the Atlantic 'jet stream', reflecting the period in Volkswagen's history when it named its vehicles after prominent winds. These also included the Volkswagen Passat (after the German word for trade wind), Volkswagen Bora (after bora), and Volkswagen Scirocco (after sirocco). Although the Golf had reached

considerable success in the North American markets, Volkswagen...

"A triumph of the human spirit! This book will make you laugh and cry as you cheer Taylor on in her fight against childhood cancer" (Jeff Gordon, retired NASCAR champion and founder of Jeff Gordon's Children Foundation). In *Paint Your Hair Blue*, Sue Matthews tells the heartwarming tale of heroic courage and devastating blows that characterized her daughter Taylor's odyssey through the underfunded world of pediatric cancer. Most of us will be touched by cancer in some way during our lifetimes. Discover how Taylor and her family learned to balance the necessity of her continuous medical treatments with the need for her to be a kid and live as normally as possible. Matthews gives dozens of tips and pointers, gleaned by trial and error, about navigating the maze of pediatric oncology through the lens of a layperson and better understand how to face fears with strength, fortitude, and confidence while living life to the fullest. Matthews and her sister, Andrea, will make you a better warrior in the war on cancer with this story of survival, where love transcends all and where every moment is a celebration of life. When gasoline prices rise, people notice: the news is filled with reports of pinched household budgets and politicians feeling pressure to do something to ameliorate the burden. Yet, raising the gasoline tax to internalize externalities is widely considered by economists to be among the most economic efficiency-improving policies we could implement in the transportation sector. This dissertation brings new evidence to bear on quantifying the responsiveness to changing gasoline prices, both on the intensive margin (i.e., how much to drive) and the extensive margin (i.e., what vehicles to buy). I assemble a unique and extremely rich vehicle-level dataset that includes all new vehicle registrations in California 2001 to 2009, and all of the mandatory smog check program odometer readings for 2002 to 2009. The full dataset exceeds 49 million observations. Using this dataset, I quantify the responsiveness to gasoline price changes on both margins, as well as the heterogeneity in the responsiveness. I develop a novel structural model of vehicle choice and subsequent utilization, where consumer decisions are modeled in a dynamic setting that explicitly accounts for selection on unobserved driving preference at both the time of purchase and the time of driving. This utility-consistent model allows for the analysis of the welfare implications to consumers and government of a variety of different policies, including gasoline taxes and feebates. I find that consumers are responsive to changing gasoline prices in both vehicle choice and driving decisions, with more responsiveness than in many re-

cent studies in the literature. I estimate a medium-run (i.e., roughly two-year) elasticity of fuel economy with respect to the price of gasoline for new vehicles around 0.1 for California, a response that varies by whether the vehicle manufacturer faces a tightly binding fuel economy standard. I estimate a medium-run elasticity of driving with respect to the price of gasoline around -0.15 for new personal vehicles in the first six years. Older vehicles are driven much less, but tend to be more responsive, with an elasticity of roughly -0.3. I find that the vehicle-level responsiveness in driving to gasoline price changes varies by vehicle class, income, geographic, and demographic groups. I also find that not including controls for economic conditions and not accounting for selection into different types of new vehicles based on unobserved driving

preference tend to bias the elasticity of driving away from zero -- implying a greater responsiveness than the true responsiveness. This is an important methodological point, for much of the literature estimating similar elasticities ignores these two issues. These results have significant policy implications for policies to reduce gasoline consumption and greenhouse gas emissions from transportation. The relatively inelastic estimated responsiveness on both margins suggests that a gasoline tax policy may not lead to dramatic reductions in carbon dioxide emissions, but is a relatively non-distortionary policy instrument to raise revenue. When the externalities of driving are considered, an increased gasoline tax may not only be relatively non-distortionary, but even economic efficiency-improving. However, I find that the welfare changes from an increased gasoline tax vary significantly across counties

in California, an important consideration for the political feasibility of the policy. Finally, I find suggestive evidence that the "rebound effect" of a policy that works only on the extensive margin, such as a feebate or CAFE standards, may be closer to zero than the elasticity of driving with respect to the price of gasoline. This suggestive finding is particularly important for the analysis of the welfare effects of any policy that focuses entirely on the extensive margin.
